DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Digital to Analog Converter Transistor Array and Method of Layout."

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the references of record neither reveal nor render obvious the recited combination including arrangement of LSB and MSB transistors for a digital to analog converter in the claimed diagonal pattern.

Conclusion

This application is in condition for allowance except for the following formal matters:

Revise the title to mention the use of the array in a digital to analog converter.

Add prior art labels to Figures 1, 2, and 3.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213. A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,568,145 to Reynolds corresponds to prior art Figures 2 and 3, as disclosed on line 4 of page 5 in the specification. U.S. Patent 6,720,898 to Ostrem describes a diagonal array for a digital to analog converter, hereafter DAC, but has a filing date [04/10/2003] after the foreign priority date [10/22/2002] of this application. U.S. Patent 6,469,646 to Song provides two arrays [25 / 30] for DACs. U.S. Patent 6,317,069 to Male et al discloses a binary-weighted transistor array for a DAC. U.S. Patent 6,317,066 to Chiang discloses a layout arrangement of current sources in a DAC. U.S. Patent 6,222,474 to Fattaruso shows a transistor array for a DAC. U.S. Patent 5,001,484 to Weiss describes DAC bias equalization topology.
